RUMIAR

Number of animals recorded per trait and breed

Traits	Merino	Dohne	Corriedale	Texel	Total (end 2022)
Individual intake (kg/a/d) Wool data (5 traits) Rib eye area + Backfat Condition score FEC DNA	981 +390*	357 +120*	368	129	2.345
Methane (g/a/d)	981	230	298	129	2.275
Genotype (50 K)	x		x	x	1.868

** In 2022*

Genetic and genomic tools

Genetic and genomic tools

- **New** (old) **traits:** Efficiency, Residual feed intake, Methane emissions

  Correlations with other traits (trade off) – FEC

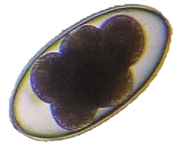
- **Genomic tools:**

  1. Accuracy increase (?)

  2. ¿Can we evaluate something we didn´t measure?

  3. GWAS

¿What do we know? - GIN resistance



Correlations

↑ Wool, BW → ↓ FEC 👍

↓ FD → ↑ FEC 👎

rg	FEC	
GFW	-0.15	+
CFW	-0.08	+
FD	-0.16	!
YW	-0.35	+

Heritability

0.15±0.01 Merino

0.21±0.02 Corriedale

How to measure (protocol)

Cardellino el al. 1994; Castells 2009, Bell et al. 2020

FEC in lambs vs FEC in periparturient ewes (periparturient rise)

rg=0.81±0.11

More efficient to use lamb FEC for selection

Merino (Ciappesoni et al., 2013) (Goldberg et al., 2012)

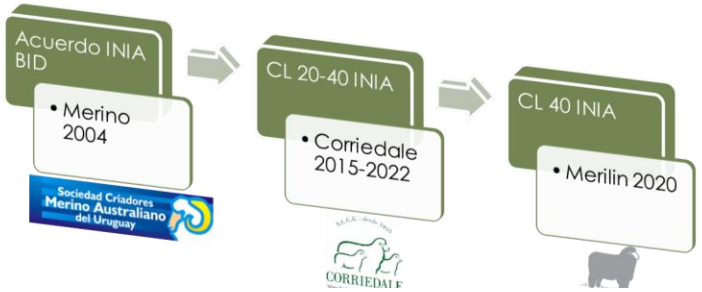
FEC in low or high worm burden challenge: **rg=0.87±0.04**

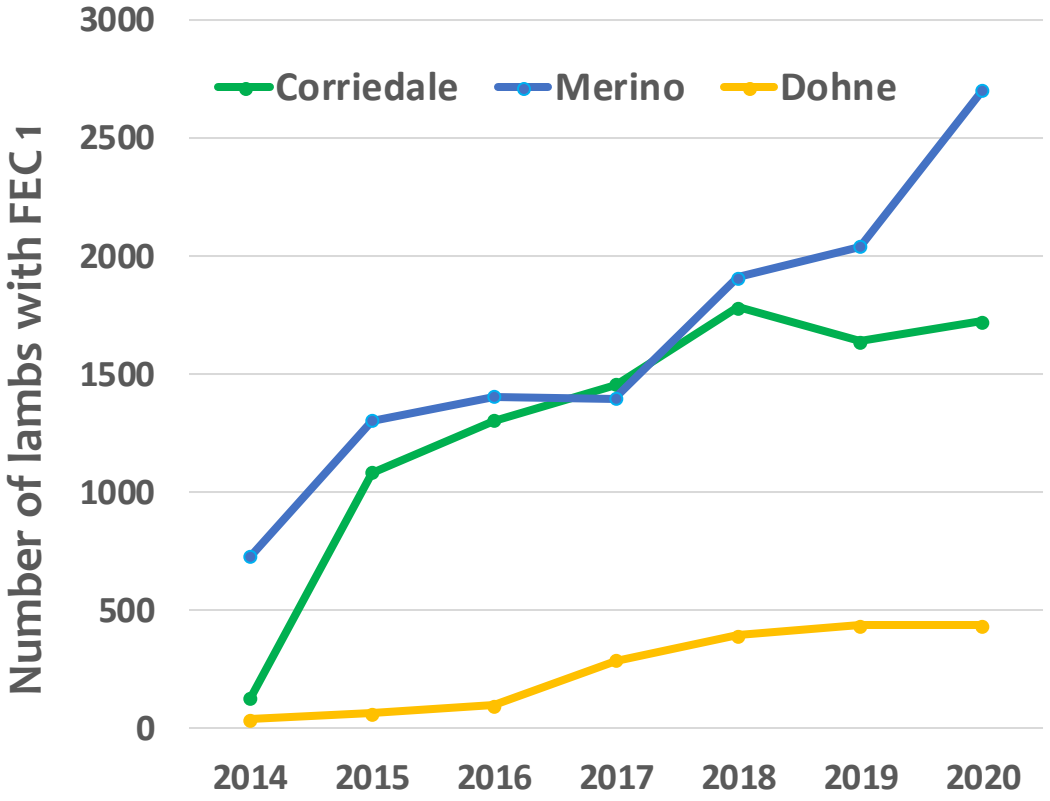
FEC correlation with **FAMACHA:** **rg= 0.55 ±0.12**

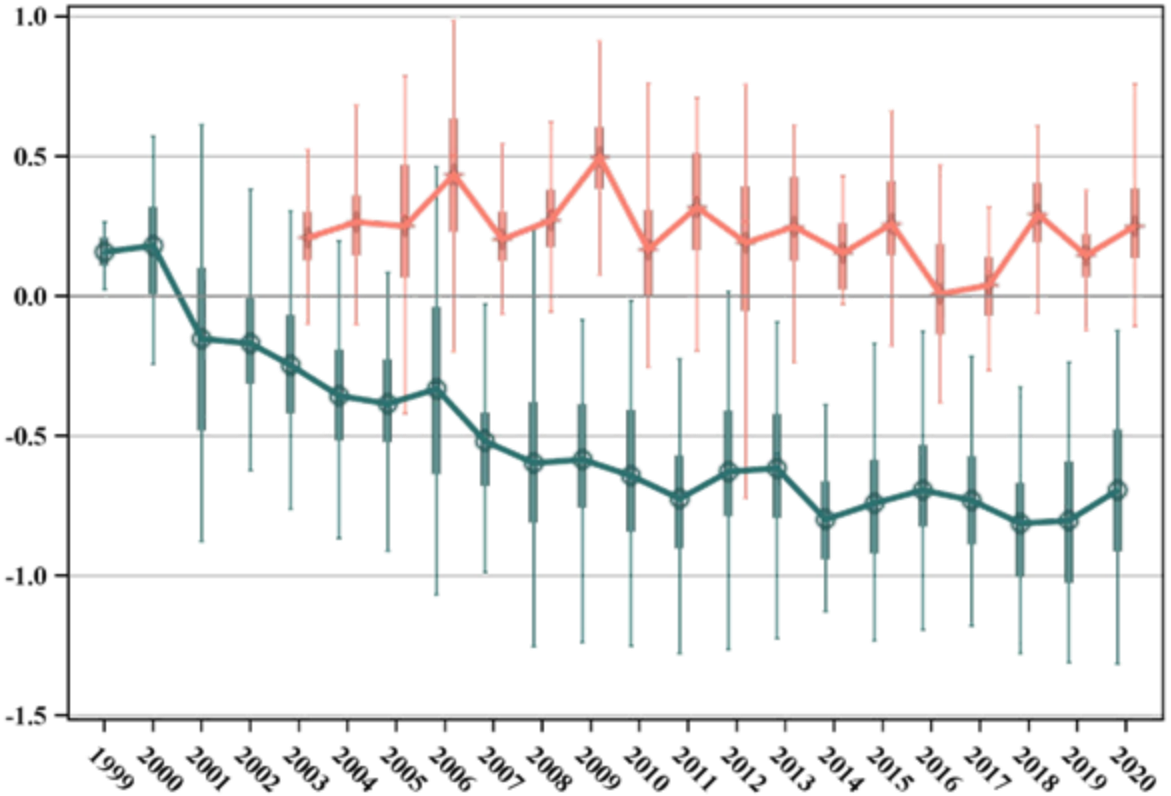
FEC correlation with **BCS** **rg= -0.35 ±0.10**

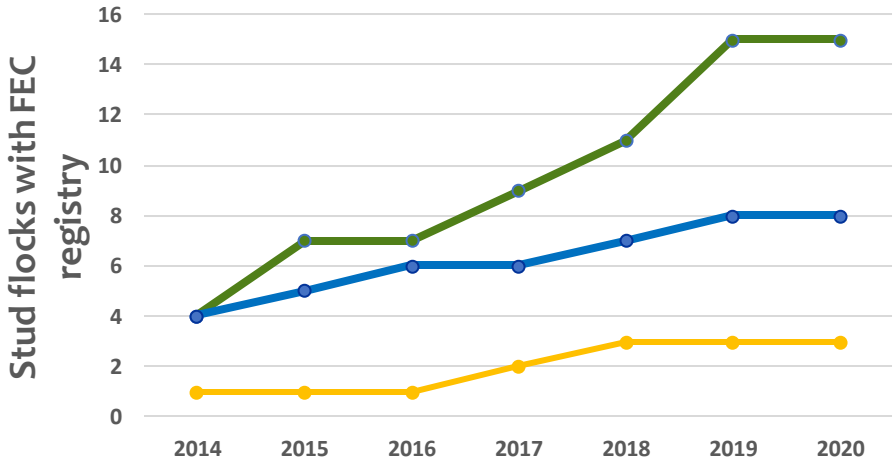
Corriedale (Castells, 2009) (Balconi et al., 2020)

¿What do we know?









PhD Camila Balconi Marques

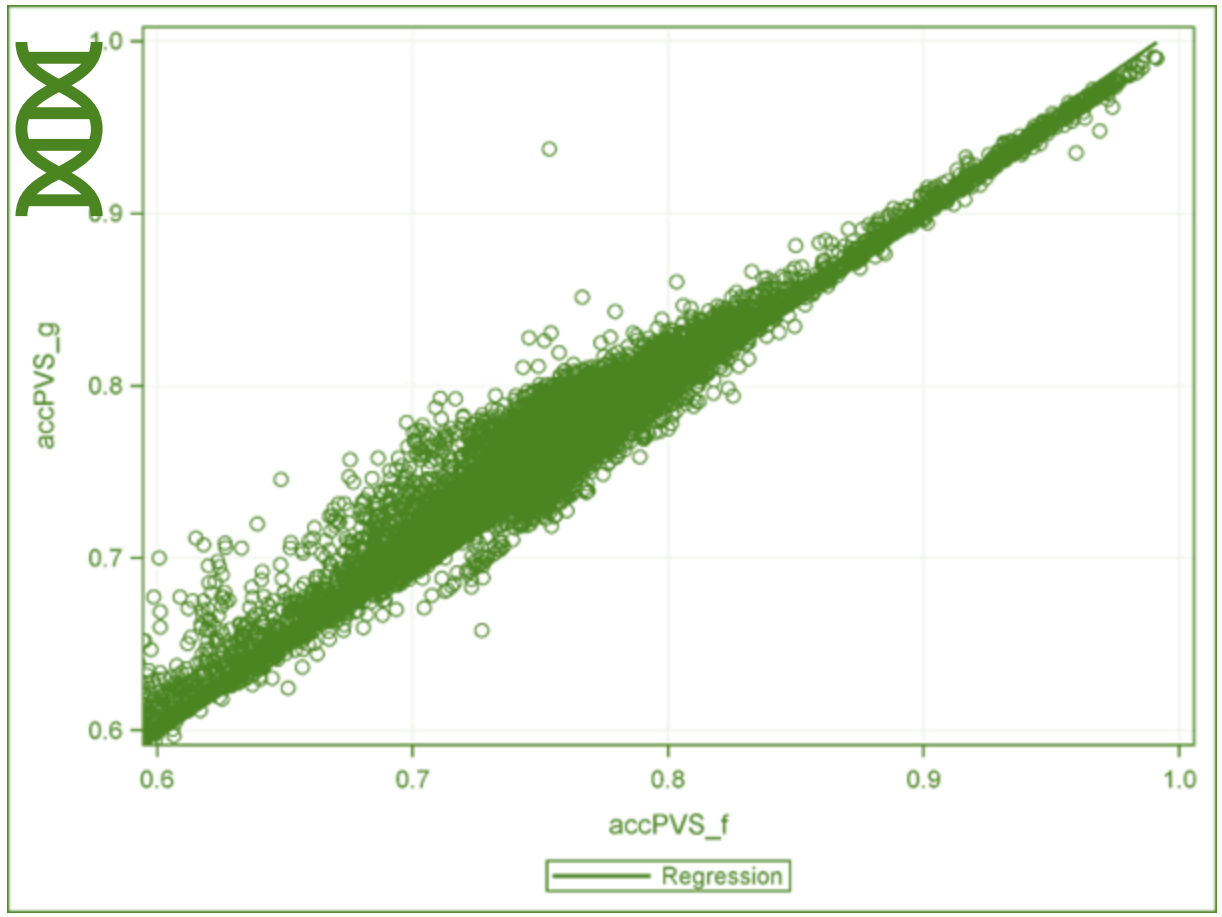
New traits

	RFI	Feed intake	O_2	CH_4	CO_2	GFW
RFI	0.27					
Feed intake		0.38				
O_2			0.26			
CH_4				0.23		
CO_2					0.27	
GFW						0.41

Genomic tools : accuracy increase

PhD Brenda Vera

First genomic evaluation in sheep in America



>63.582 **Australian Merino** phenotypic records

>83.000 animals in the pedigree

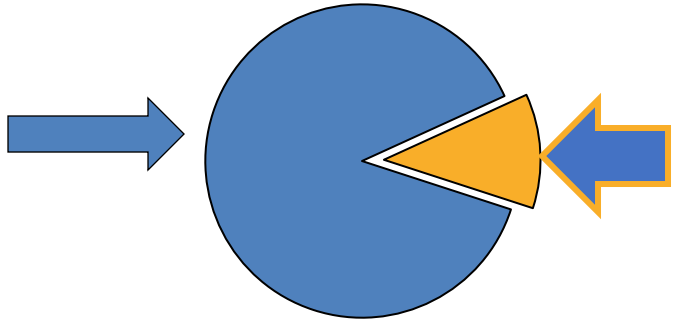
2.230 genotyped animals (imputed to 40K GGP)

Genotypes	N	%
only lamb	159	0.2
Lamb and Dam	63	0.07
Lamb and Sire	675	0.8
Trio (L+S+D)	1,301	1.5
only Dam	395	0.5
only Sire	16,759	19.2
Nothing	67,839	77.8

With genomics: can I evaluate something I didn´t measure?

PhD Brenda Vera

Stud flocks with FEC
Glencoe´s Nucleus with FEC and Genomic information

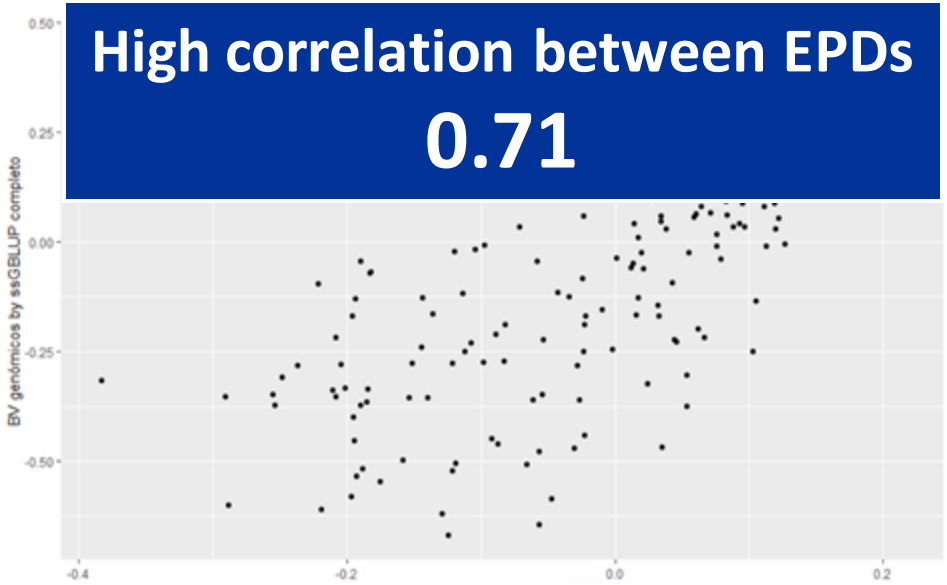


- FEC records from one stud flock are “erased”
- 156 animals with genomic information
- EPDs are estimated only with genomics

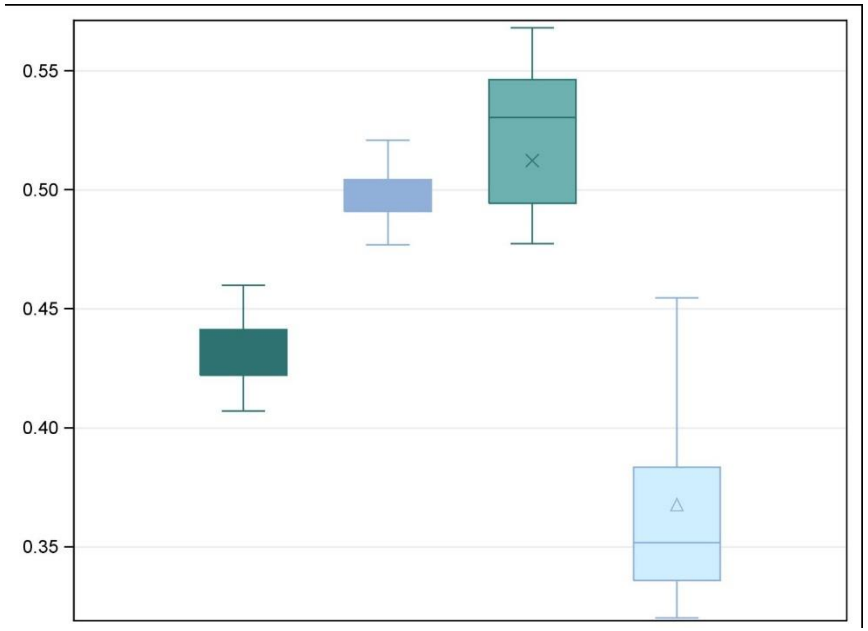
EPD with **data and genomics**

High correlation between EPDs

0.71



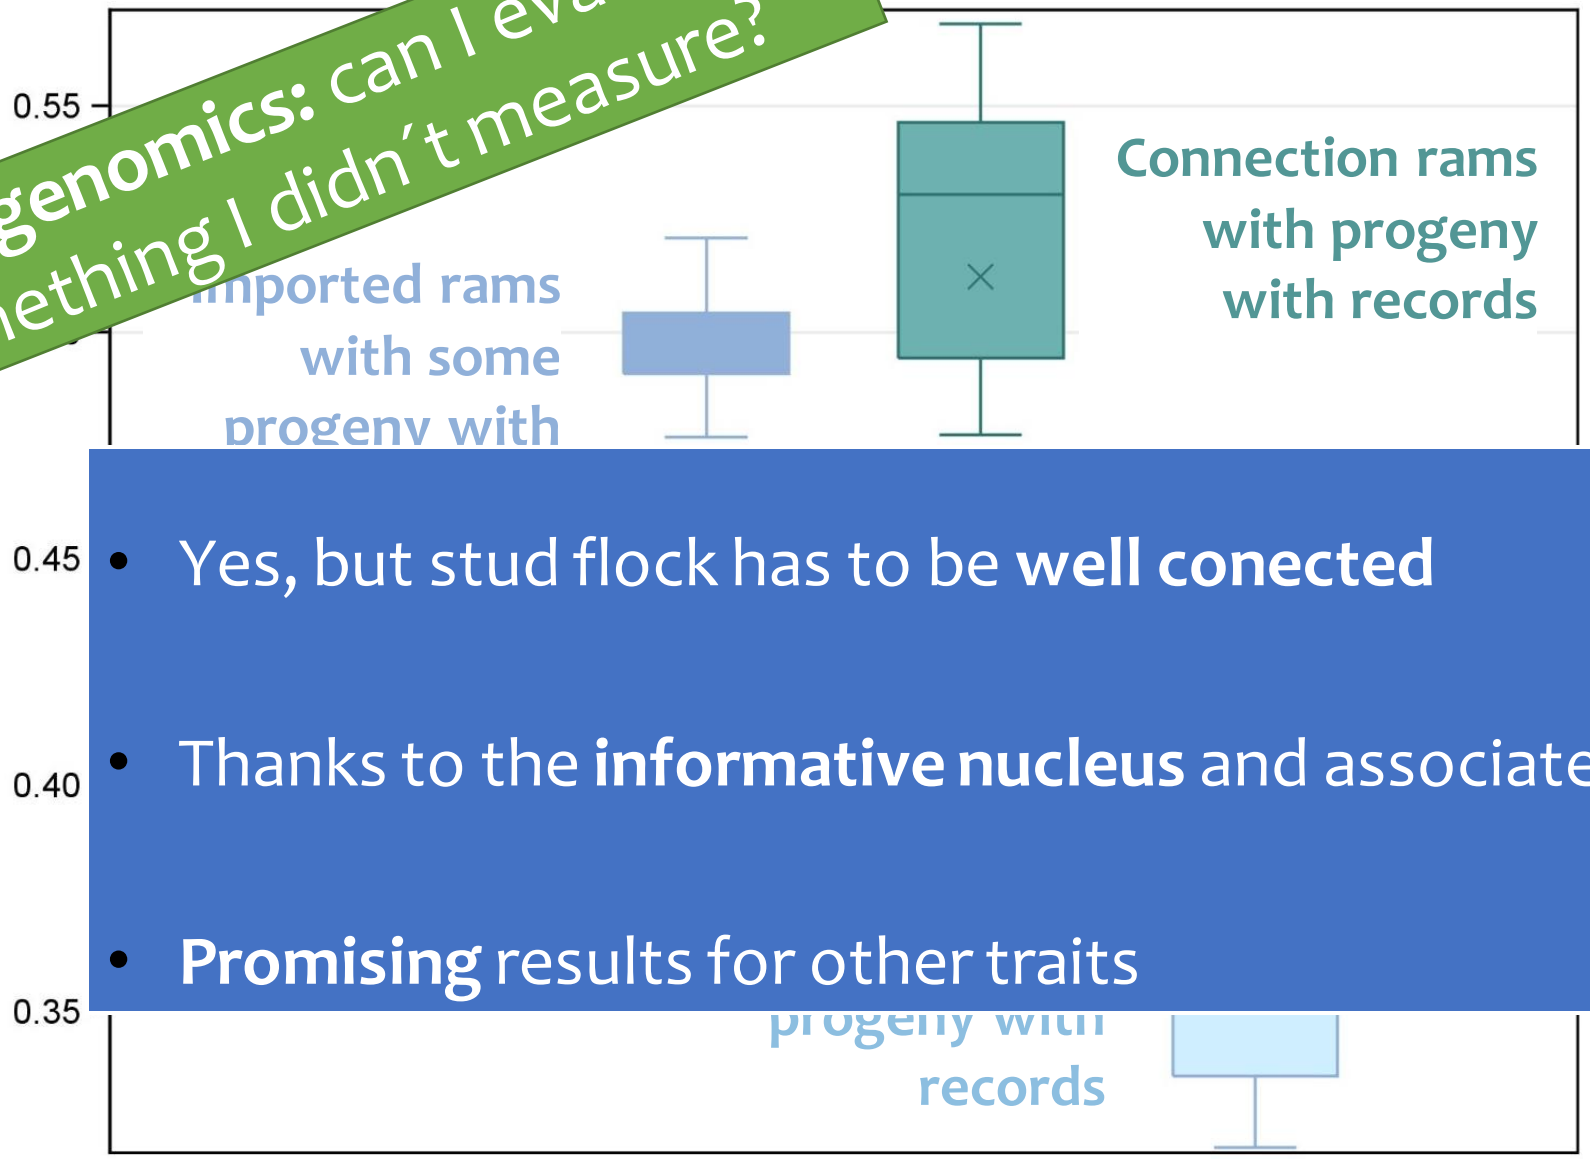
EPD only with genomics



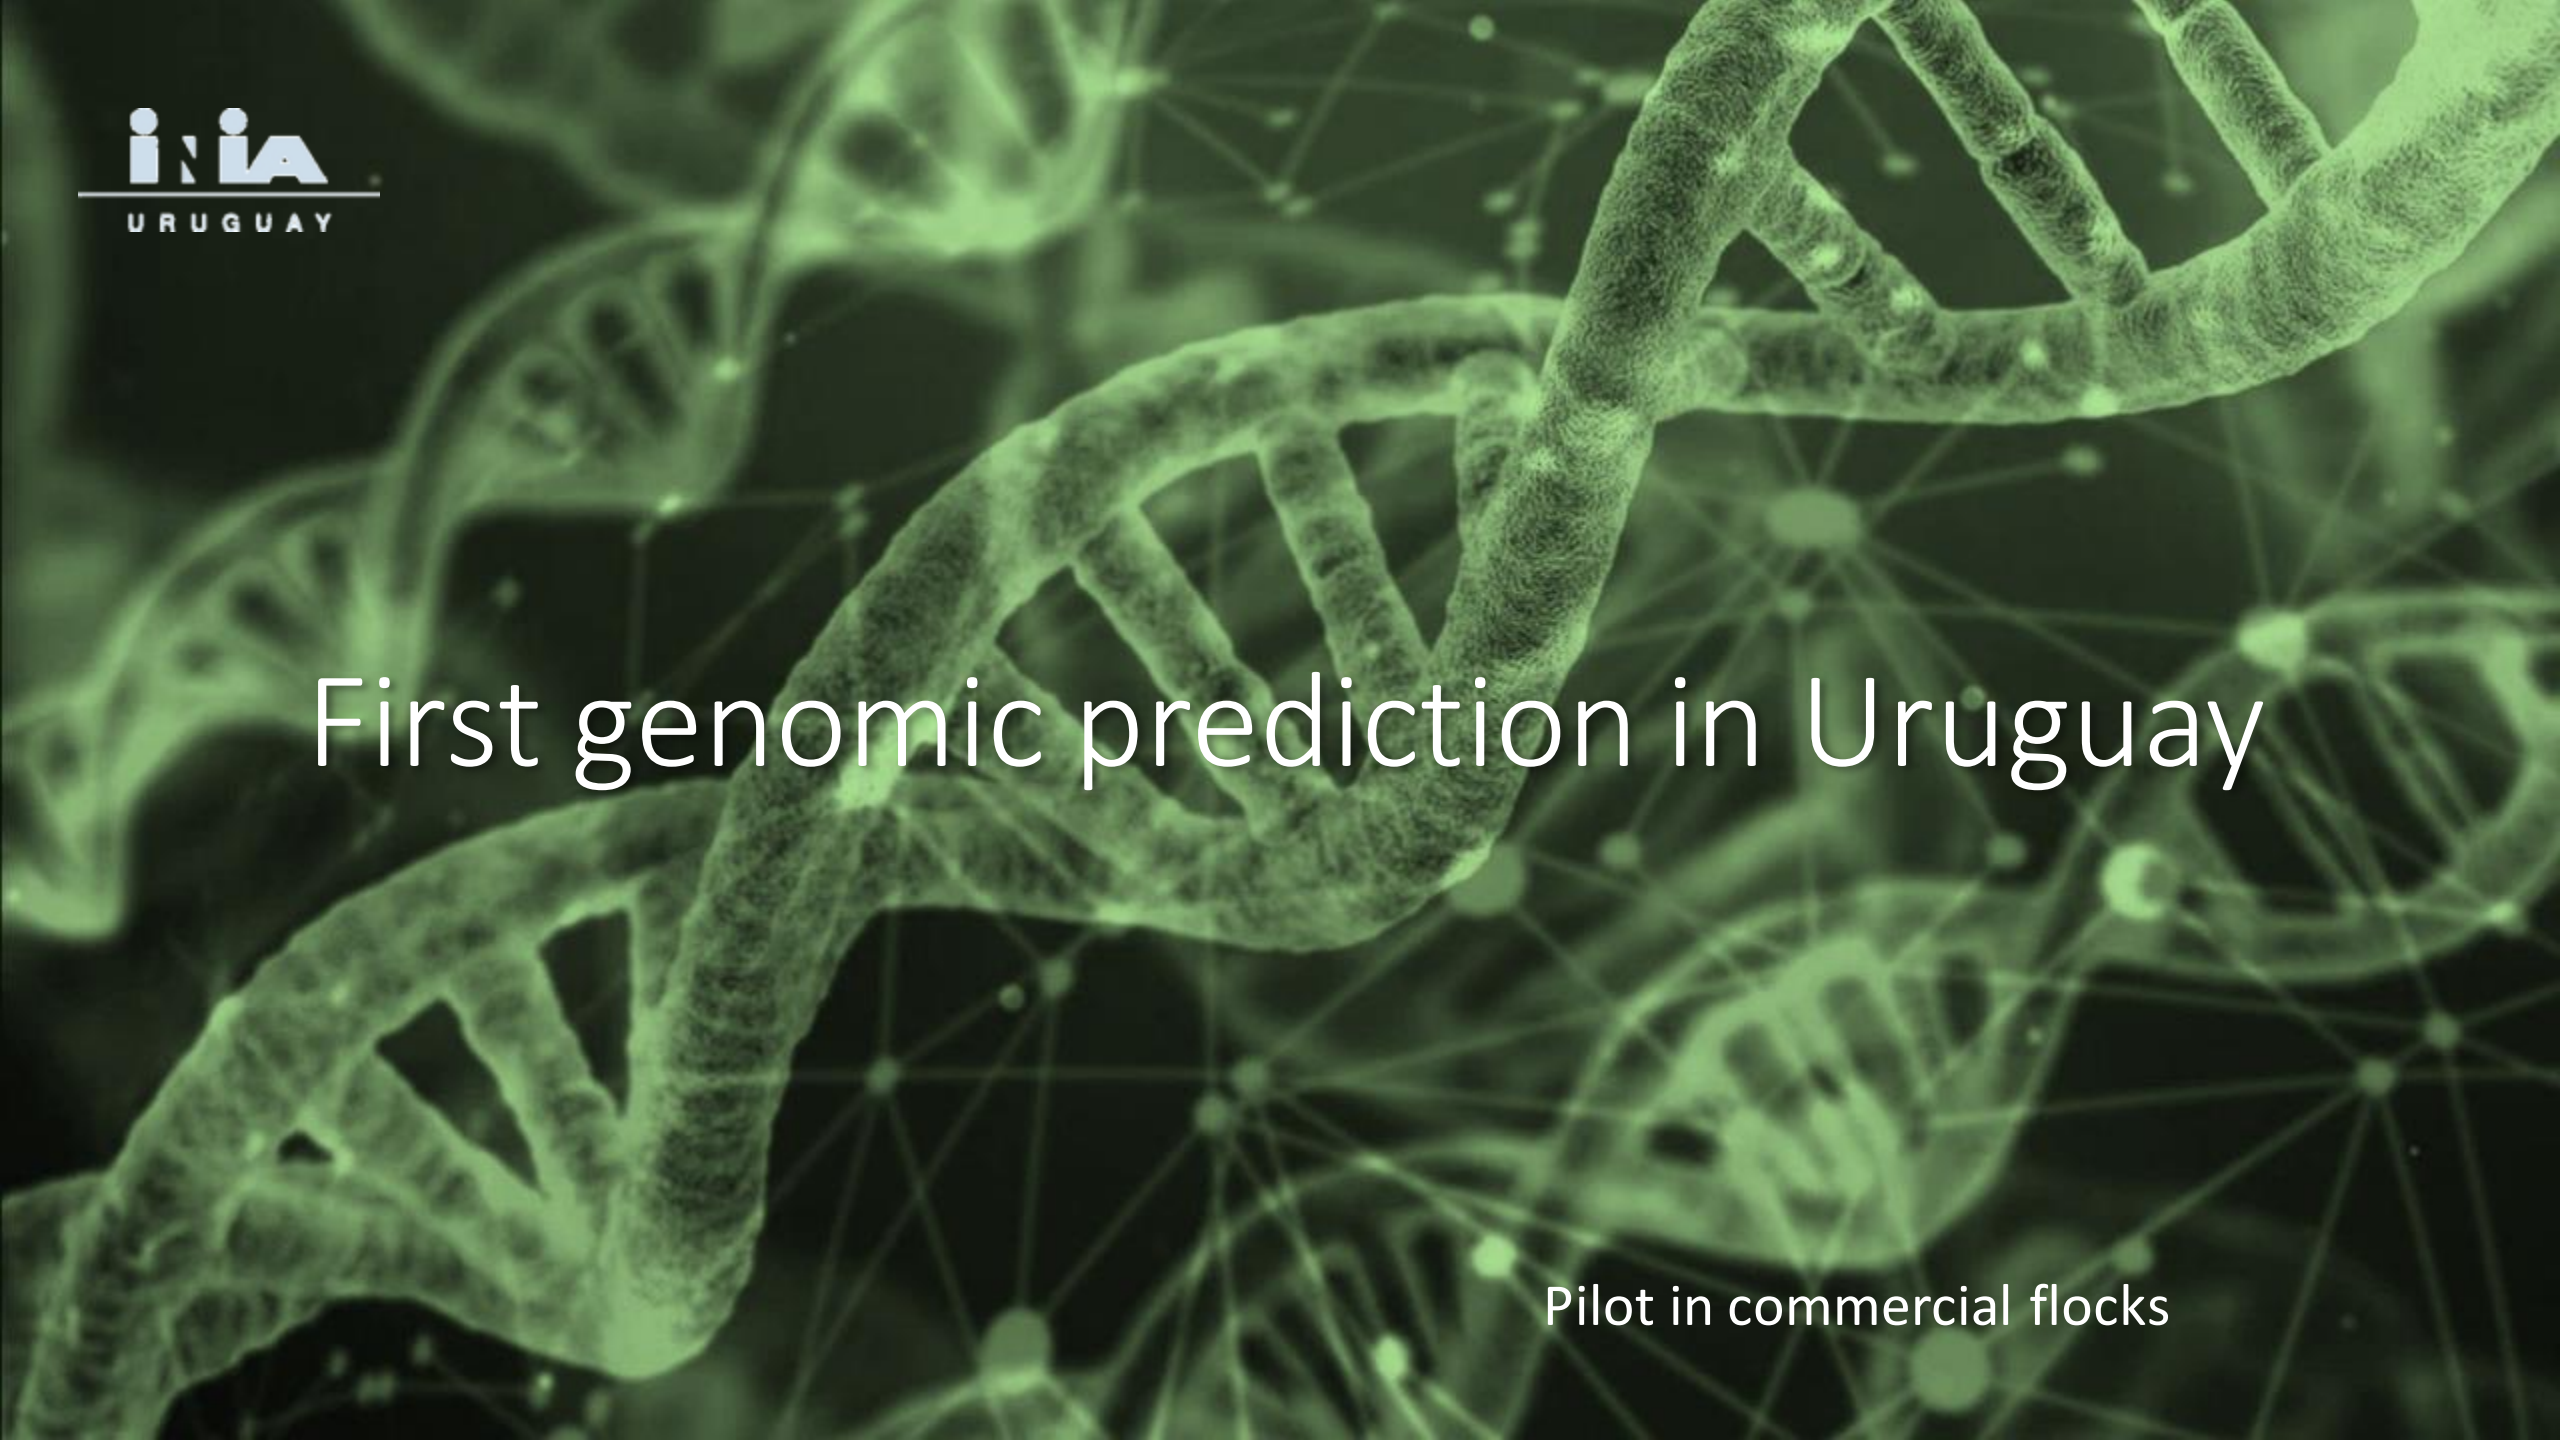
FEC mean accuracy per Sire group

PhD Brenda Vera

With genomics: can I evaluate something I didn´t measure?



- Yes, but stud flock has to be **well conected**
- Thanks to the **informative nucleus** and associated **stud flocks**
- **Promising** results for other traits



First genomic prediction in Uruguay

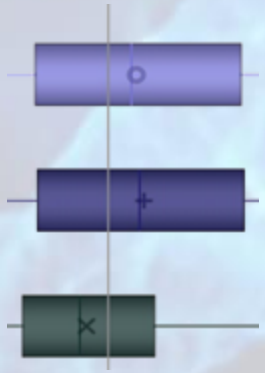
Pilot in commercial flocks

Predictomics

36.854 sheep with and without phenotype

1.652 genotyped with 10.691 SNP(10K).

Ram team from La Soledad y Manatiales **20 & 20**

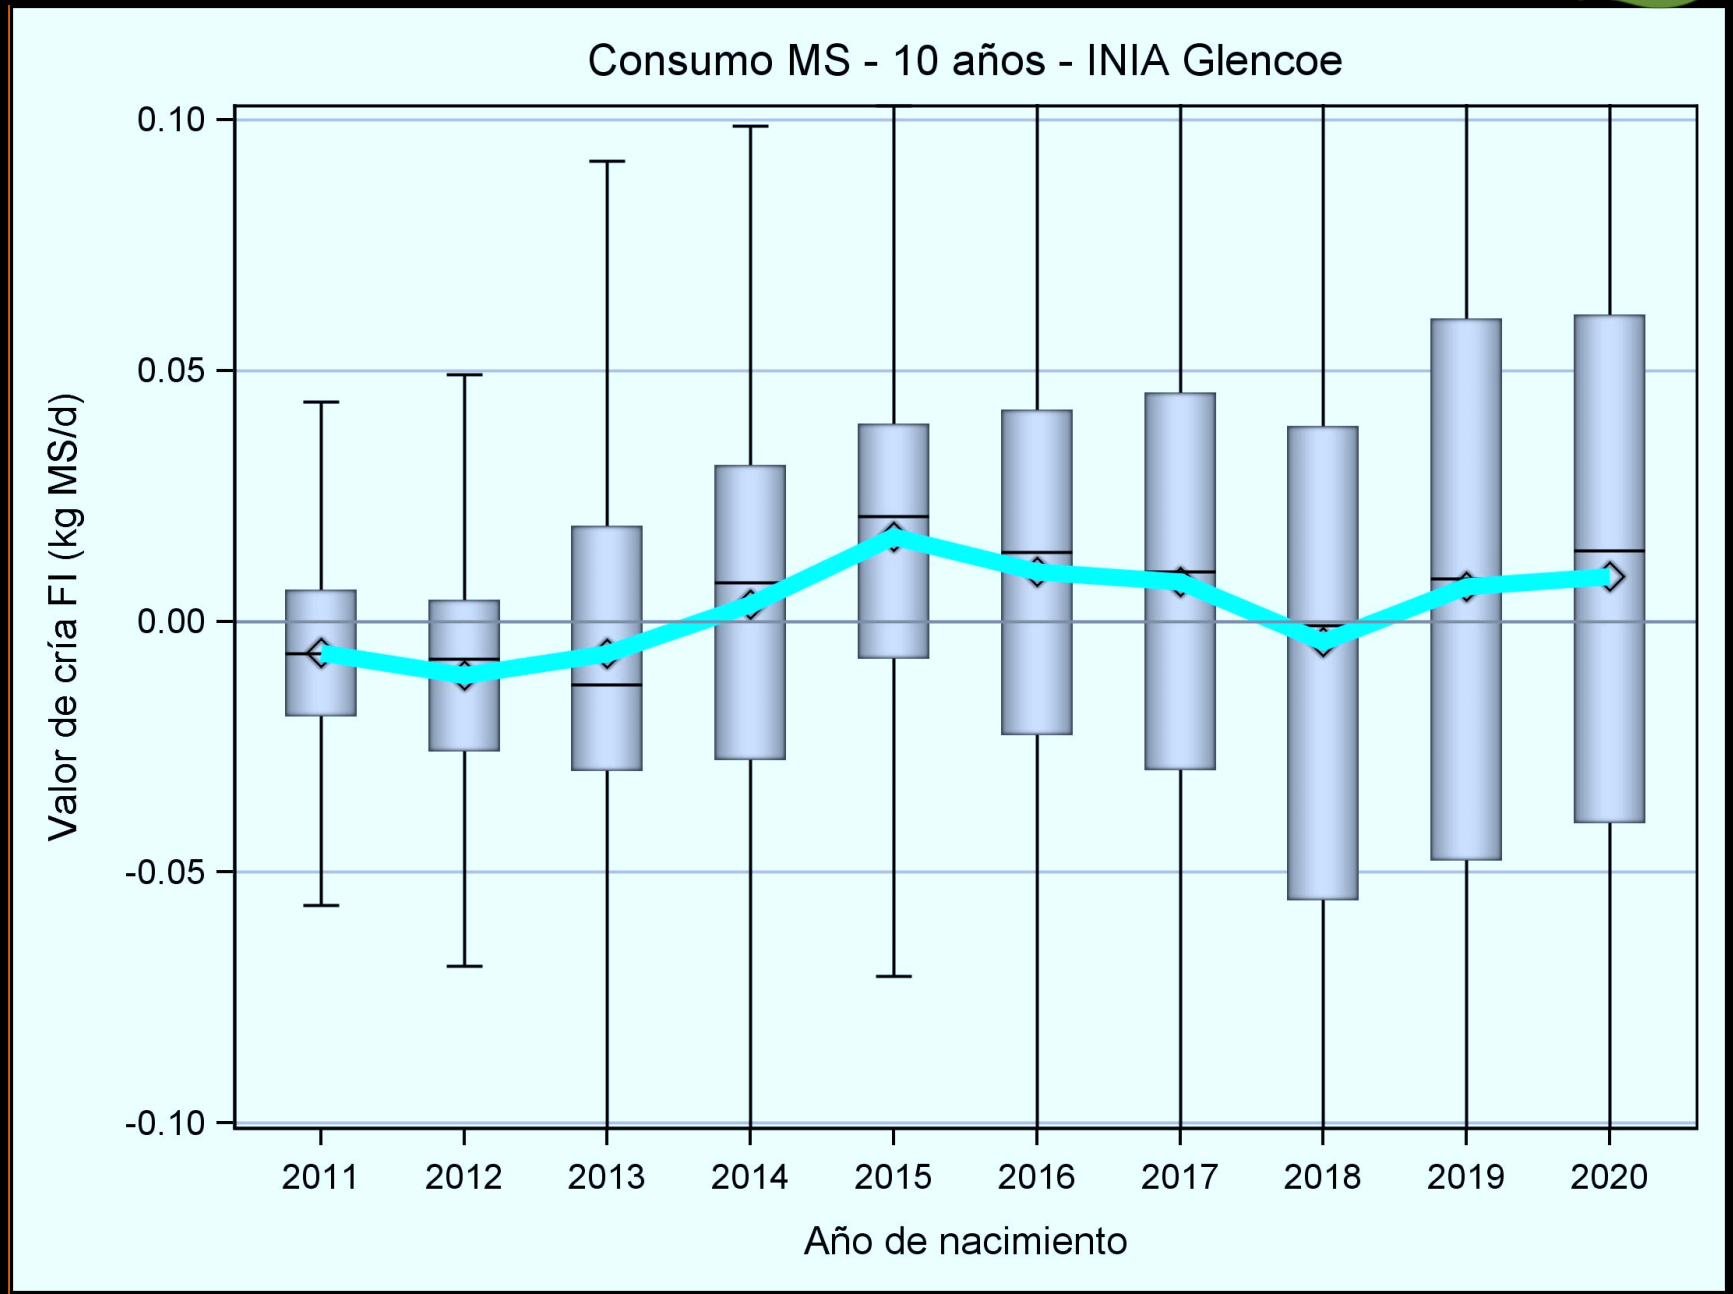


Comparison with:

- ✓ All stud-flocks (no INIA, n>10.400)
- ✓ All INIA Glencoe nucleus (without 2020 drop, n>5.200)
- ✓ INIA 2020 drop (n=359)

by Brenda Vera

Genetic trends Merino: Glencoe Nuclues



¿How close are the commercial flocks to the studs?

Agroecology: Implementation in sheep systems

Agroecology: Implementation in sheep systems

The new breeding pyramid

Informative Nucleus

Research platform: generation of knowledge, training courses for technicians and filed days for farmers

Stud Flocks

Applied Research platform: stud flocks with specific traits (e.g. FEC, Methane), reference farmers, pilot plan for design of agroecological transitions, field days

Commercial farmers

Validation & Development Platform: Initial picture (environment & genetics), define agro[illegible]ological transition (co-innovation) linked to the value of the system (e.g. wool fr[illegible]enerative a[illegible]ure)
